

Bangladesh Payment Transfer File Generation

Functional Design & Configuration Specification (FDD-033)

MODULE CONTEXT	: Cash & Bank Management Accounts Payable
SCOPE	: Automated .txt file generation for approved TR-WIRE payments
CLIENT / LOCATION	: CIMMYT Country Office (CO) – Bangladesh

Executive Summary & Gap Analysis

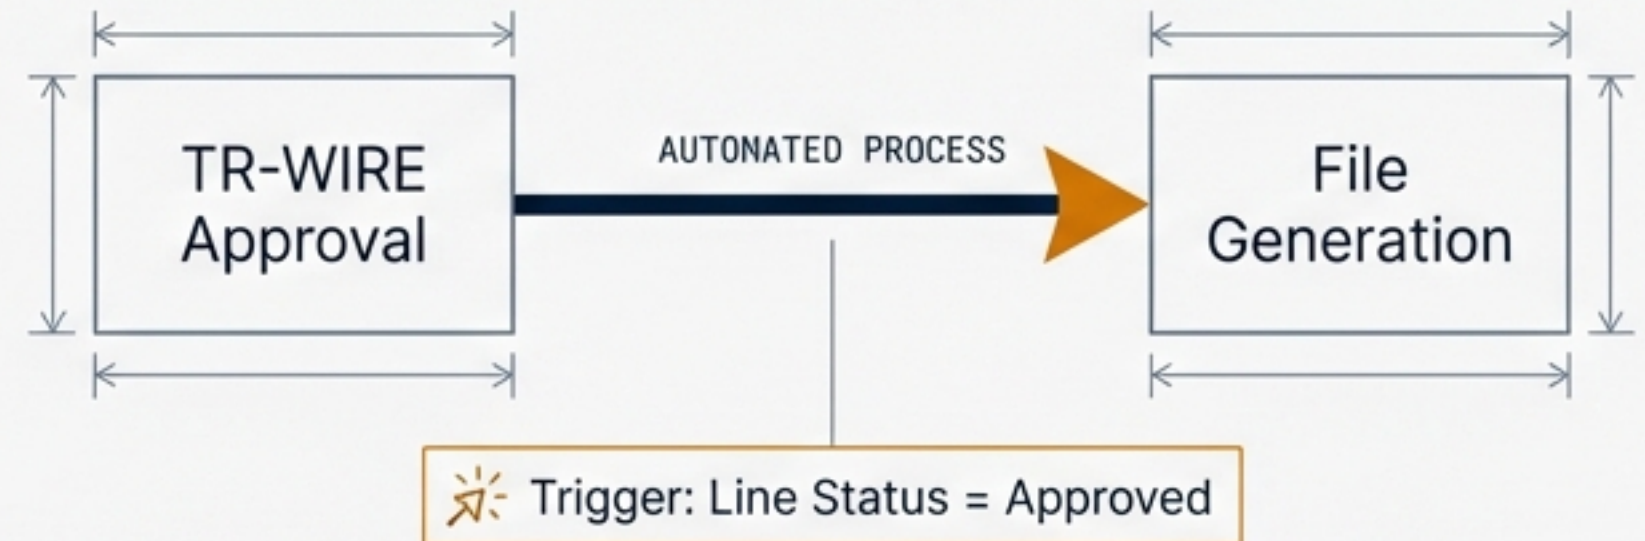

Current State (The Gap)

Currently, there is missing functionality for generating compliant vendor payment files specifically for the Bangladesh Country Office (CO). Manual intervention is required.

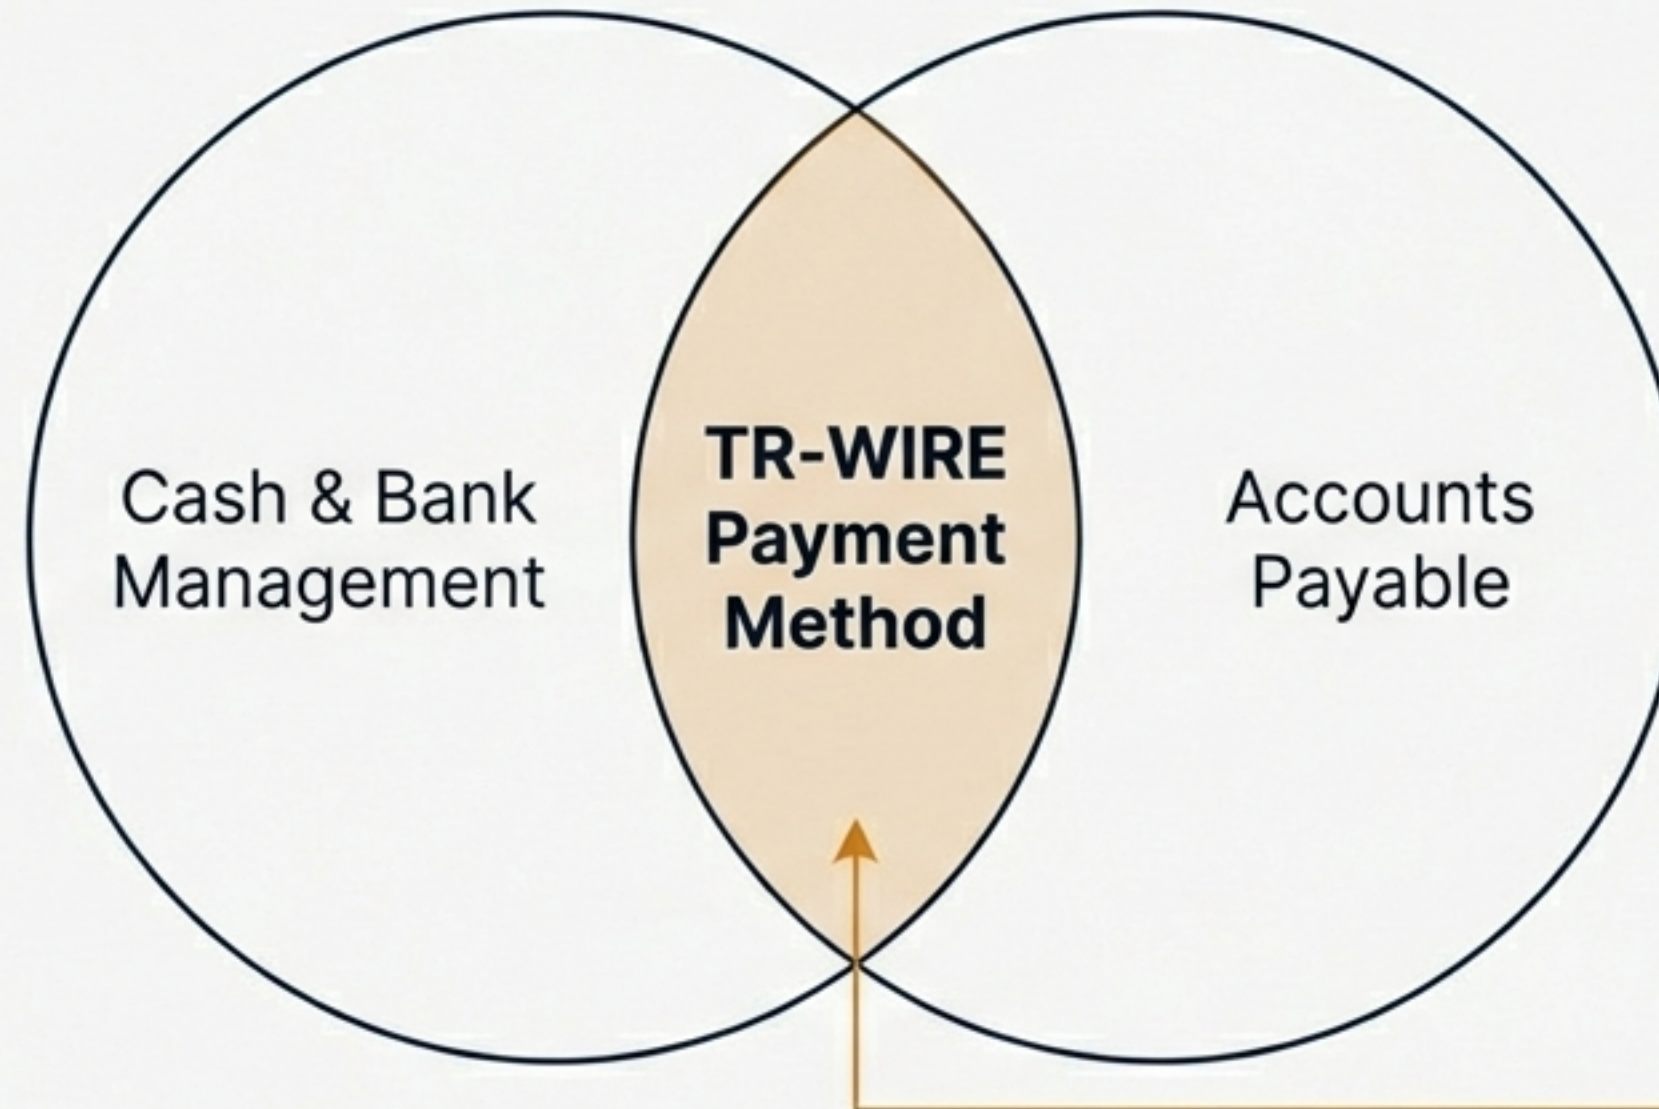

Future State (The Objective)

Automate the creation of a payment transfer file immediately upon the approval of a payment line. Defined as an Independent Customisation.

System Context & Impact

Primary Configuration Path

Accounts payable > Payment setup > Method of payments > **TR-WIRE**

Key Setting: File formats Fast Tab > Export format

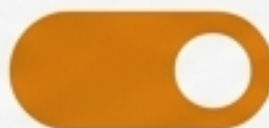

Configuration Control

Global Master Switches

CIMMYT – RO customizations

Require Bangladesh
payment file

On

Master Boolean.
If True: Logic Active.
If False: Logic Bypassed.

Require Beneficiary ID

On

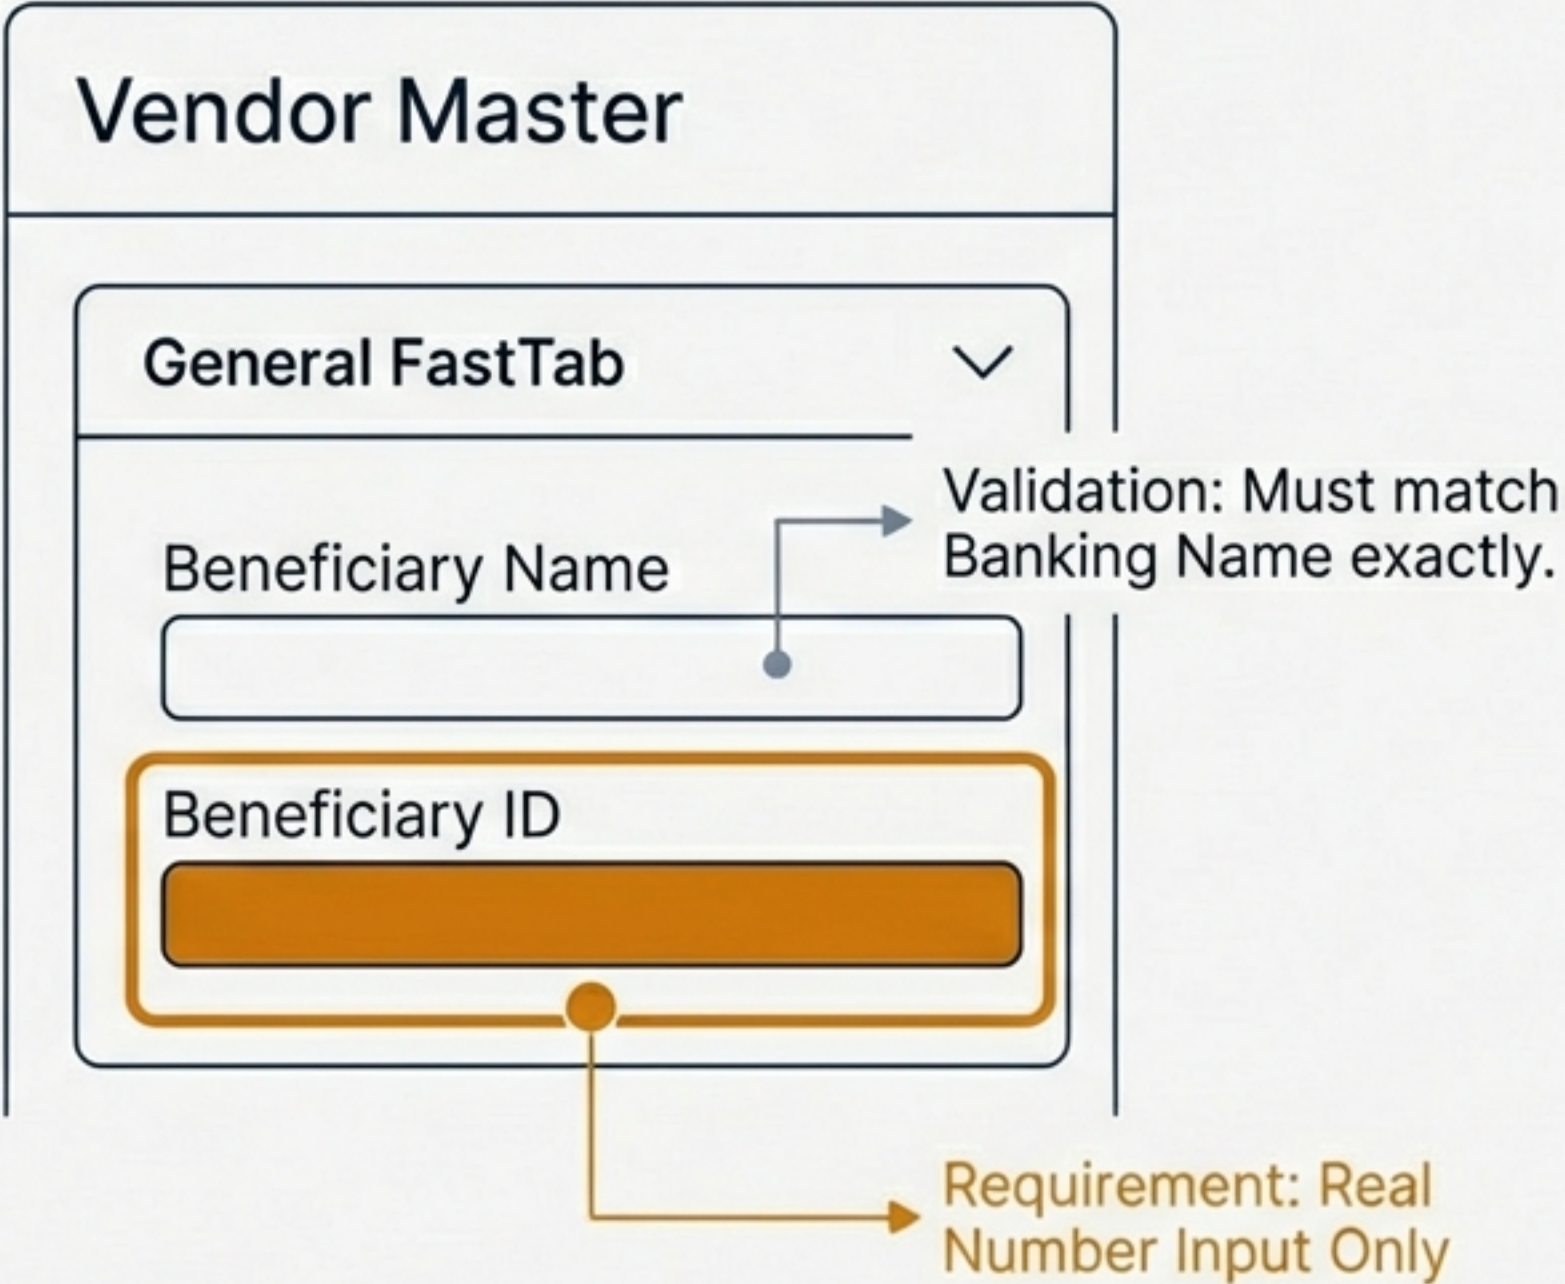

Linked to Data Entity:
Vendors V2

Field Mapping: Payer & Transaction

ID	Field Label	Data Source Path	Type
01	Originating Account	AP > Payment journal > Offset account > Bank account number	# Numeric
03	Transaction Amount	AP > Payment journal > Debit amount	# Numeric
04	Currency	AP > Payment journal > Currency	Aa Alphanumeric
05	Transfer Date	AP > Payment journal > Date	# Numeric
07	Sender Description	AP > Payment journal > Description	Aa Alphanumeric

Field Mapping: The Beneficiary

Field Label	Source
Beneficiary Account	Vendor > Set up > Bank accounts > Bank account number
Swift Code	Vendor > Set up > Bank accounts > Swift code
Beneficiary Name	Vendor > General tab > Name
Beneficiary ID	New Custom Field on Vendor Master

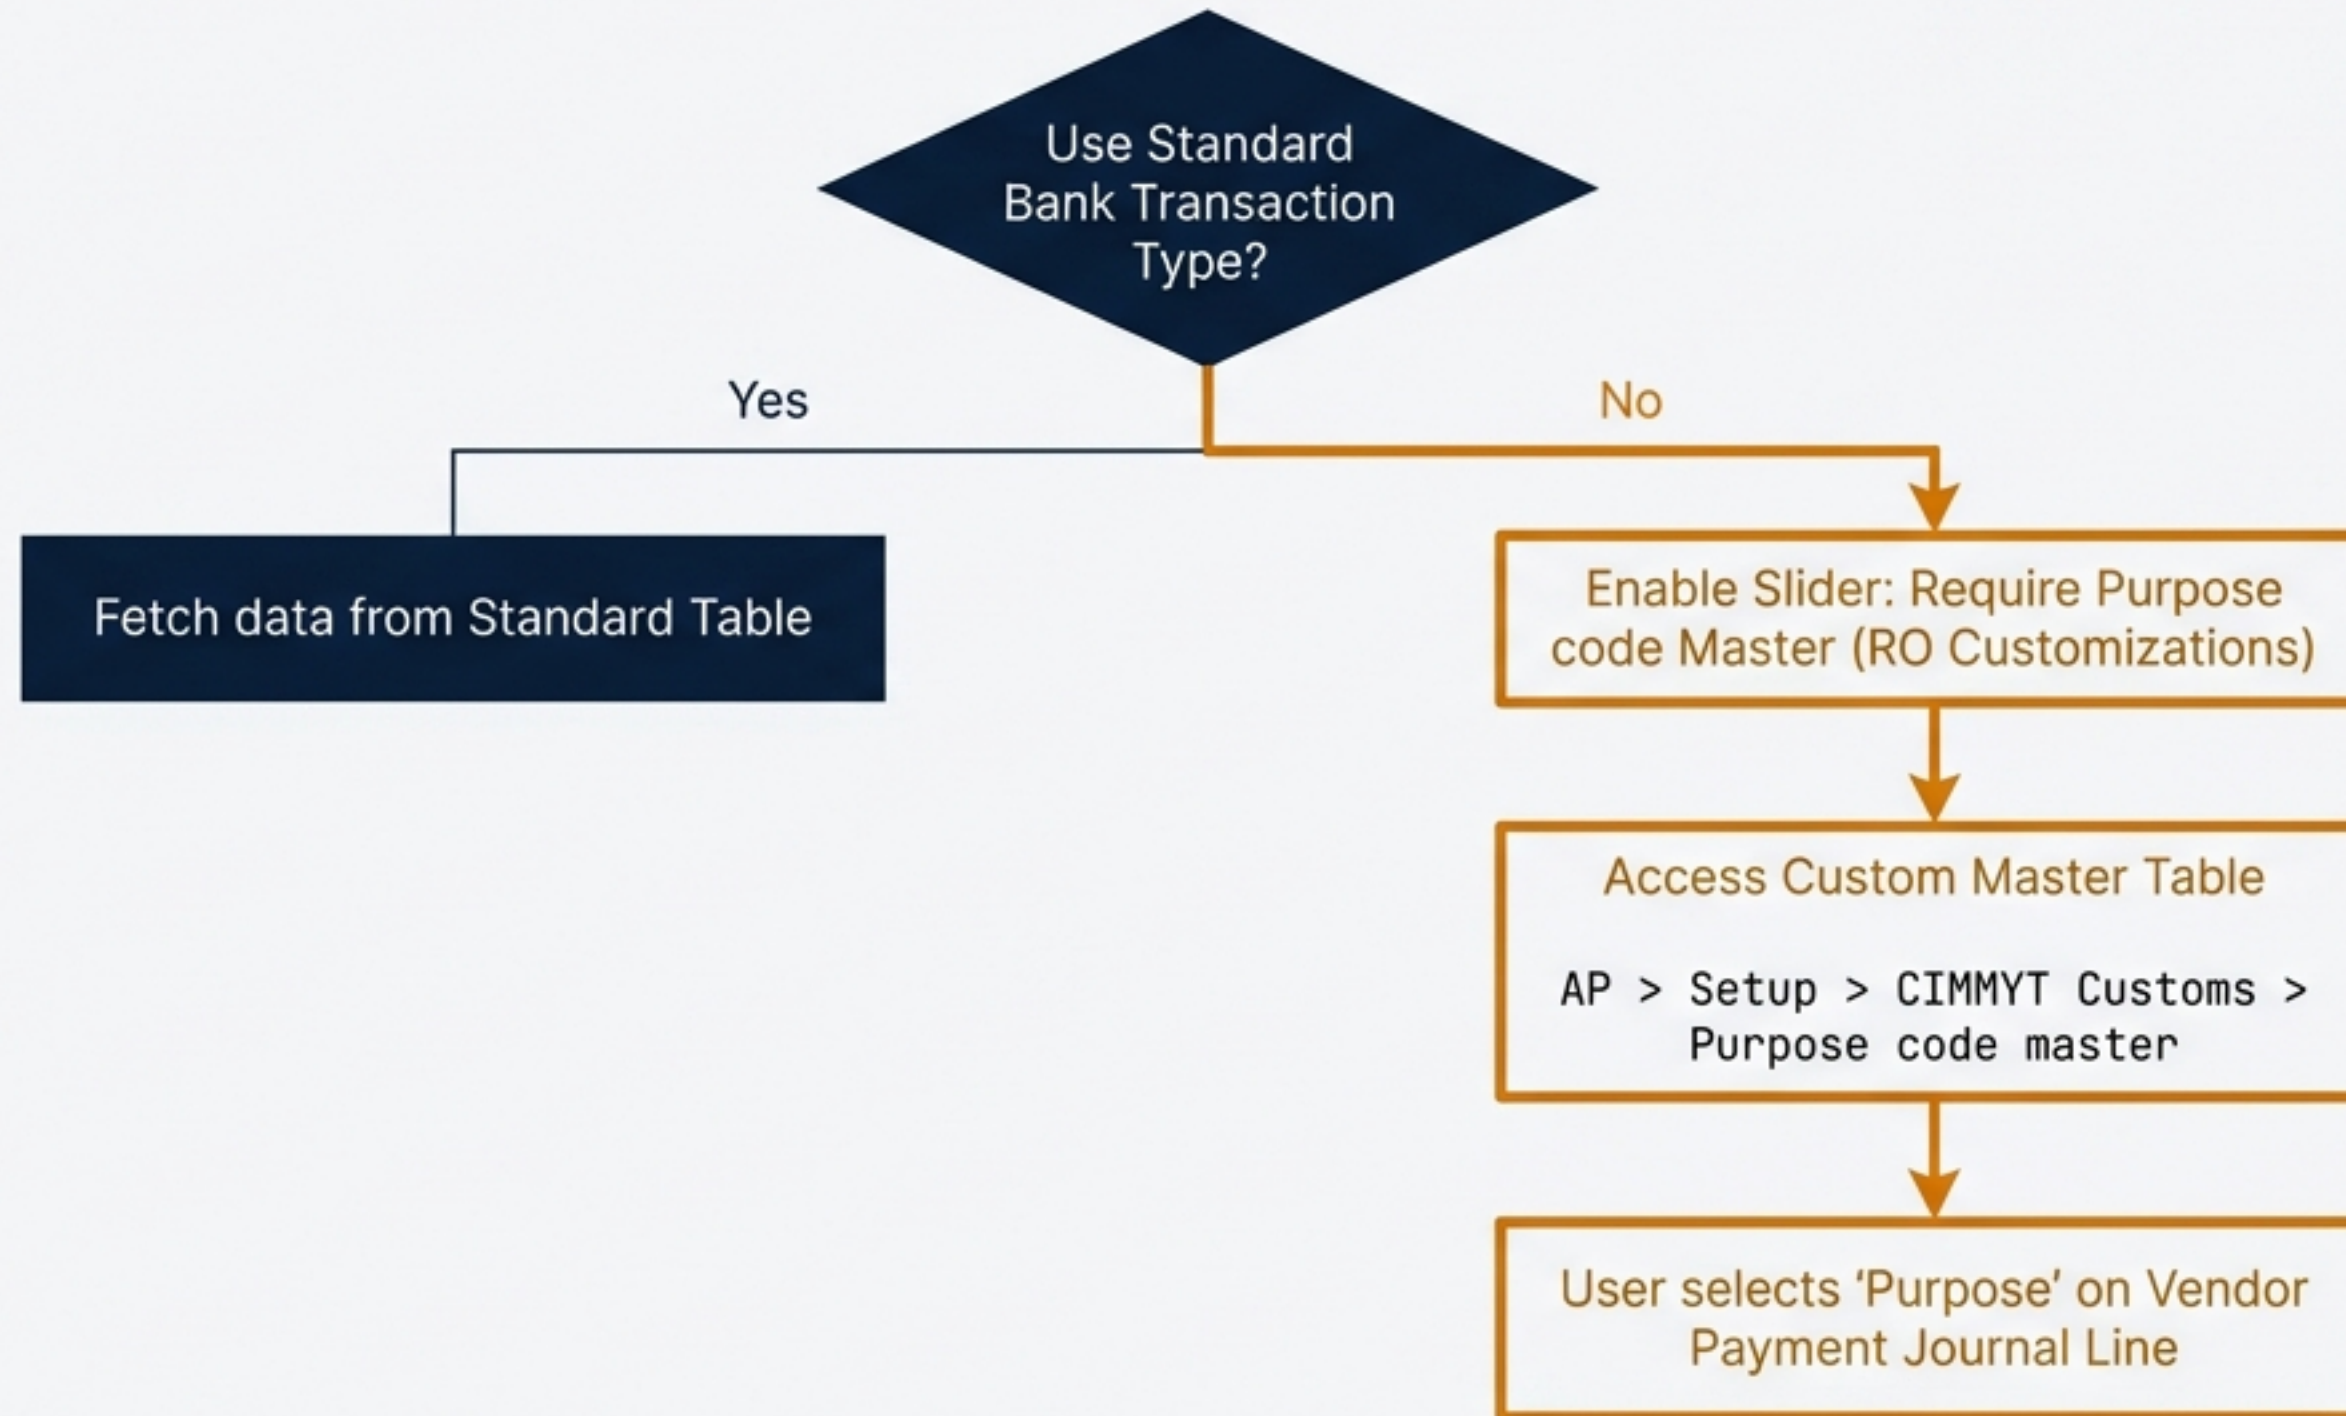

Hardcoded Constraints

Static file elements required by bank format

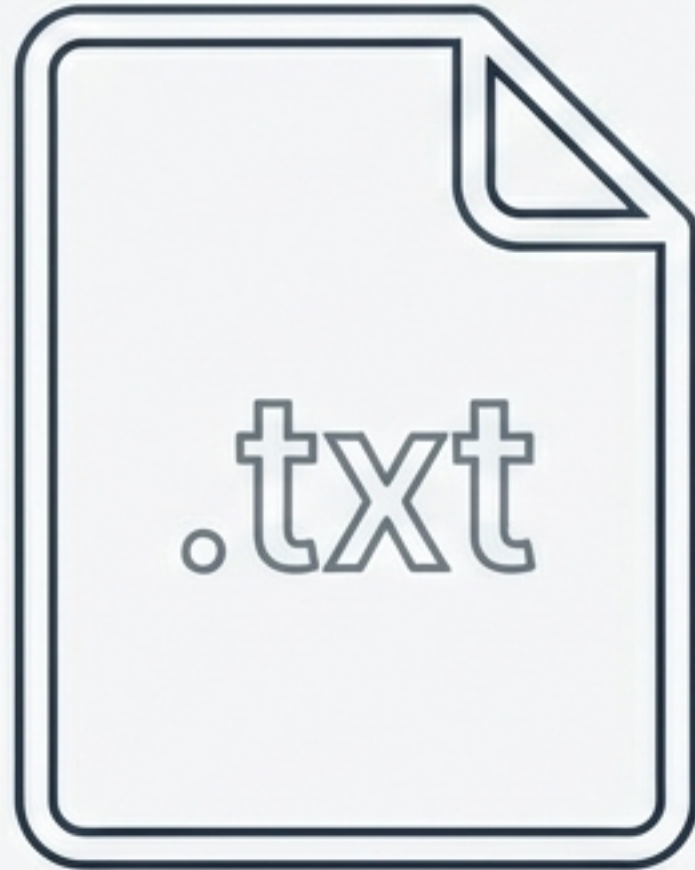

These fields do not accept user input or database lookups.
They are written directly into the file generation logic.

Conditional Logic: Purpose Code

Output Specifications

- **File Format:** Text File (.txt)
- **Naming Convention:** Must match Journal Batch Number
- **Validation:** See attached Excel format validations
- **Sample:** See attached Txt format sample

00492_Batch.txt

Dynamic Journal Batch ID

Functional Testing Scenarios

QA TEST CARD

TEST CASE ID: 001

DESCRIPTION:

Posting of vendor payment journal

CONDITIONS:

1. Method of Payment = **TR-WIRE**
2. Line Status = **Approved**

EXPECTED OUTCOME:

Automatic generation of a .txt transfer payment file conforming to the 14-field map.

SECURITY / PERFORMANCE: Not Applicable

2024.05.28

REV A

Summary & Sign-off

The functional design covers the end-to-end flow from configuration switches to the final .txt output. All assumptions and security parameters have been reviewed.

OPEN ITEMS

None

NEXT STEPS

Proceed to development based on logic defined in Slides 5-9.
